

INTRODUCTION

This is the second edition of our Newsletter. In the newsletters we will inform you about all new developments and statuses in our company and market.

MEET & GREET

A great turnout at the Meet and Greet on September 9.

Fort St. Gertrudis in Geertruidenberg was transformed into an attractive presentation room.

While enjoying a snack and drink, Hytech presented itself to its customers with its products, innovations and services.

A small impression of this day.

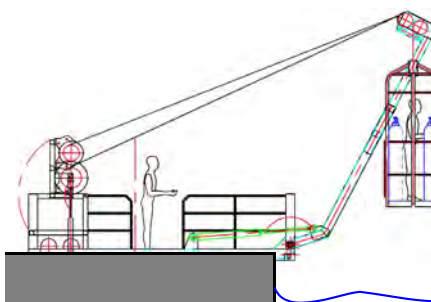

NEW PROJECTS

A SMALL SELECTION

For a customer in the Netherlands we are building 5 systems, comprising: 2 containers with decompression chambers, 1 container with dive control and 2 LARS systems.

LARS stands for Launch And Recovery System. Its a cage system with a capacity for 2 divers. The cage can be loaded to a depth of up to 100 meter. The cages operates at a distance of 2 meters from the wall of the vessel. The system meets all IMCA and Lloyds requirements.

Container with Decompression Chamber

Hytech is awarded with a contract from a customer in Singapore, to design and manufacture complete a new life support system for an existing self propelled hyperbaric life boat for 18 divers, all under DNV class / certification.

Also we have a contract for the design and manufacturing of a Hyperbaric oxygen treatment facility for a Naval base in South east Asia.

A Spanish diving company ordered an offshore diving control container, complete with compressors, diving control panels, hot water machine, etc.

Hytech will be attending the IMCA annual congress in Dubai in the middle of November and is looking forward to meet existing - as well as new potential business relations.

At the moment we are manufacturing and testing a new range of air diving control panels, transportable / fixed mounted in compliance with IMCA D-023.

The diving control panels will be of a modular system, easy to operated because of ergonomic lay out, low maintenance costs, and not last but least Hytech "high quality" products/ components.

SHIPMENTS

A SMALL SELECTION
September/October

4 x DART + ATEL

1 x Wet Bell System
2 to follow

1 x Decompression Chamber

1 x Life support

1 x Nitrox Container

NEW PRODUCTS

SUBVIEW VIDEO SYSTEM

For the diving industry Hytech has developed his own communication products. These units are already used for years in diving operations worldwide.

The market demand for not only sound, but also images of the underwater situation became more and more.

In cooperation with SUBVIEW a line of new products are released.

The SUBVIEW system can simultaneously capture, visualize and store submerged activities with four waterproof cameras on a battery powered video system, integrated in a single rugged travel case.

The SUBVIEW system consists of the following main components:

- 15" LCD screen
- 4 waterproof cameras, different depth ranges
- Integrated Digital Video Recorder (DVR)
- Battery powered with status control
- Rugged travel case
- External connectivity by USB / Ethernet

The SUBVIEW system can be used in a wide range of applications and is available as basic system and as rugged system.

The free floating BUOY creates a wireless video link between the submerged camera and the video receiver on shore. This option creates a flexible solution for projects where direct cables are not possible between camera and video display. Distances over 1500 can be reached (line-of-sight).

HYTECH VIDEO / COMMS / DEPTH GAUGE UNIT

Hytech has launched a new Video/Comms/Depth gauge unit, model 3.20.820.

Comprising of:

- Diving Communicator model 701, for 1 Diver
- Digital Depth read-out
- Video connector (USB) to be connected to your Personal Computer or Laptop.
