

SUBVIEW

The SUBVIEW system can simultaneously capture, visualize and store submerged activities with four waterproof cameras on a battery powered video system, integrated in a single rugged travel case. With the integrated battery-unit the system can run stand-alone for hours, which makes it perfectly suitable for use in areas / situations where no direct power is available.

SUBMERGED OR ON THE SURFACE

Although SUBVIEW was originally designed to view submerged activities with waterproof cameras, the system can be used with any type of camera and application, submerged or on the surface.

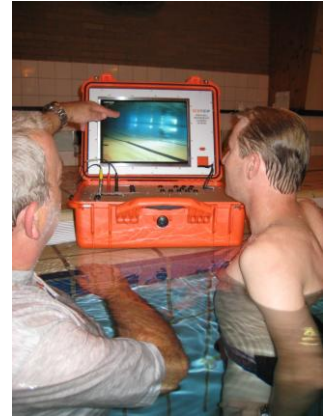

SYSTEM SETUP

The SUBVIEW system consists of the following modular components :

- 15" LCD SCREEN
- WATERPROOF CAMERAS
- DIGITAL VIDEO RECORDER (DVR)
- BATTERY-PACK WITH STATUS CONTROL
- INPUT / OUTPUT UNIT
- CONTROL UNIT
- RUGGED TRAVEL CASE

APPLICATIONS

Originally the system was designed to capture and visualize submerged activities. Due to the universal and modular setup, the SUBVIEW system can be applied in a wide range of different areas, as a total system or as a recorder for existing products with a video output.

- Swimming pools / swimming sports
- Diving sport / professional diving
- Observations of animals and plants
- Inspections maritime constructions (ships)

The list of applications mentioned above is just a small summary of the large variety of applications in which the SUBVIEW system can operate.
